## Electronic Banking Options

## YOUR INFORMATION SECURITY

Midland National Bank has teamed up with Fiserv to provide you with the highest standards of electronic banking security. However, despite the strong security measures we have put in place, electronic banking security begins with you. Please observe these few simple steps to help keep your information secure.

- Learn your password and PIN. Destroy any written record as soon as you can. Don't write down your password or PIN.
- Use different passwords for bank and credit card sites. Don't use the same password for every website.
- Use strong passwords, comprised of letters, numbers and, if possible, capital letters and special characters.
- Set online banking alerts for login events and balance changes.
- Use extra caution when using public computers to access your bank accounts.
- Never give your personal security details, such as account number or PIN, to someone you don't trust.
- Don't fall for money-laundering scams. Be wary of any "business opportunity" that involves receiving or holding money for strangers.
- Keep tabs on your money. Review your bank statements regularly.
- If you spot any unusual transactions, report them immediately.
